The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25-MAY-2001;
30-AUG-2001;
10-OCT-2001;
The invention relates to 242 human STAT6-activating proteins and cDN encoding them (ADG10411-ADG10894) and to sequences with 95% or more homology to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host or comprising a STAT6-activating protein-encoding nucleic acid; the recombinant production of a STAT6-activating protein; an antibody specific for a STAT6-activating protein; antisense oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; STAT6-activating protein; drug screening; activator; inhibitor; allergic disease; inflammation; autoimmune disease; diabetes; hyperlipidaemia; cancer; infection; util infection; human immunodeficiency; cancer; Thi hyperfunction; antiallergic; antiinflammatory; antidiabetic; antilipaemic; antiinfective; anti-HIV; cytostatic; gene therapy; antisense therapy; ribozyme therapy; gene;
                                                                                                                                                                                                                               STAT6-activating proteins and encoded genes, applicable in diagand developing drugs to treat allergic diseases, inflammations, autoimmune diseases, diabetes, hyperlipidemia, infections e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ribozymes targeted to nucleic acids encoding a STAT6-activating protein; methods of screening for activators or inhibitors of STAT6-activating proteins; drug compositions comprising a modulator of STAT6-activating protein activity or expression; and methods of treating patients by administration of the drug compositions. The STAT6-activating proteins, nucleic acids encoding them, and modulators of their activity or expression are useful in the diagnosis and treatment of allergic diseases, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, cancer, infections (e.g., HIV), cancer and disorders associated with Thl hyperfunction. The present sequence is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2238;

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits

Lung cancer-associated polymucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polynucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences ABX76124-ABX76474 represent lung cancer-associated polynucleotides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

The invention relates to an inhibitory RNA (RNAi) molecule derived from a nucleic acid molecule comprising a defined nucleic acid sequences given in the specification or a sequence which hybridizes to the sequences and encodes a Notch signaling target gene or which is a degenerate as a result of the genetic code of the sequences. The methods and compositions of the present invention are useful for manipulating the phenotype of stem cells, preferably pluripotent stem cells. This sequence corresponds to one of the nucleic acid molecules of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or cc other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a cc patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The crimention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a cc nucleic acid of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and methods are useful for diagnosing, prognosing and treating cander and other conditions such as psoriasis, ischaemia, heart disease, attherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may calso be useful in wound healing and in contraception. The present of the invention.

The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
This invention relates to a novel human diaphanous-3 (DIAPH3) protein and CC of DIAPH3 cDNA in the prognosis of breast cancer, such that the DIAPH3 CC protein can be used as a target for anti-cancer drugs or for the CC identification of molecules with anti-cancer drugs or for the CC invention provides antibodies that specifically bind to the DIAPH3 CC protein, as well as methods to identify an agent that modulates the DIAPH3 to a binding partner. In particular it describes CC measuring the expression level of DIAPH3 using hybridization oligos and CC comparing this with a control expression level, where a raised expression CC level indicates a poor prognosis with respect to breast cancer. As such, CC it also provides small interfering RNA oligos that can hybridize to the CC DIAPH3 gene and inhibit expression thereof. The peptide and nucleic acid Sequences of this invention are useful as markers to differentiate cancer and are useful as targets for screening assays designed to clean tify inhibitors or modulators of DIAPH3 activity, which in turn are useful as targets for screening assays designed to therapy and exhibit cytostatic activity. This polymucleotide sequence is a human gene marker that when expression is upregulated in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New purified diaphanous-3 (DIAPH3) peptides and nucleic acids, useful targets for screening assays designed to identify inhibitors or modulators of DIAPH3 activity, which are useful for treating breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;

                                                       This invention relates to a novel method of characterising prostate tissue in a subject and to compositions and methods for cancer diagnostics, including cancer markers, in particular prostate cancer. Prostate cancer (PCA) is a leading cause of male cancer-related death. Additional serum and tissue biomarkers would aid diagnosis. The invention may provide means of producing compounds with a cytostatic activity or allow the development of gene therapy. The methods of the invention useful for characterising prostate tissue in a subject, screening compounds, characterising inconclusive prostate biopsy tissue in a subject, detecting AMACR (alpha-methylacyl-coenzyme A racemase) expression in a bodily fluid, characterising tissue in a subject, detecting a subject and inhibiting the growth of cells. The present sequence is a DNA sequence which is preferably utilised in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                Characterizing prostate tissue sample from a subject and detect of hepsin, pim-1 or EZH2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             prostate tissue; cancer diagnostic; cancer marker; prostate commale cancer related death; serum biomarker; tissue biomarker; gene therapy; prostate biopsy tissue; AMACR; alpha-methylacyl-coenzyme A racemase; diagnosing cancer; cell

                   The invention relates to an agent for the prophylaxis and therapy of cancer comporising a compound which inhibits the activity or expression of Numan EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic coids. The invention also relates to a kit for screening for inhibitors of EZH2 activity or expression. EZH2 is a component of a complex with histone methyltransferase activity which methylates histone H3 on lysine cresidues at position 9 and/or 27. It has been found to be deregulated in cc various tumours, and acts as a mediator of tumorigenesis, being able to reverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing, treating and diagnosing cancers such as colorectal cancer, breast cancer, lung cancer, pancreatic cancer and ovarian cancer, and can also be used in drug screening. The agent of the invention is safe and less toxic than prior art cancer prophylactic/therapeutic agents. The present sequence represents a DNA encoding human EZH2 which was used in an example of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멅
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
